2022-BRAA-005-SMS Implementation
Addendum #3

A summary of questions received since the issuance of Addendum #2 are listed below:

1. Is the FDOT Grant funding limited to specific software solution(s)? What software solution(s) will BRAA procure with the FDOT Grant funding (i.e., only proposed solution(s) under SMS base bid as outlined in 4.2 SCOPE OF WORK TO BE PERFORMED or additional proposed solutions as well)? **FDOT grant funding is currently provided for the acquisition and implementation of an SMS and its associated software and peripherals if needed.**

2. Does BRAA have a complete list of additional items it intends to purchase (i.e., airfield inspection modules, lease management modules, environmental reporting, etc.)? What are BRAA's priorities regarding these additional items (i.e., first, second, third, priority as well as timelines)? Does BRAA have a budget or funding set aside for the additional items? **BRAA will entertain any and all additional items if a company offers them in no particular order or priority. Additional features and functions of software acquired beyond the initial SMS scope will be funded through future budgeting depending on need and pricing once evaluated.**
