**QUESTIONS/REQUESTS FOR CLARIFICATION AND ASSOCIATED RESPONSES:**

- 1.) Please confirm that the only wall type being used is A3. On sheet A001 it specifies different wall types including a block wall (Type F) with insulation.

**RESPONSE:** A3 is the only wall type being used.

- 2.) On sheet A705 it is showing 2 different Millworks. I see G15 & G9 goes next to the movable partition in the Conference Room 113, but where does A15 & A9 go?

**RESPONSE:** G15 and G9 reference the north-south direction of the L-shaped millwork. A15 and A9 reference the east-west section of millwork. On the floor plan A103 the elevation tag that says A12/A705 should actually say A9/A705. The section cut on A9/A705 references the cross-section detail A15/A705.
