BOCA RATON AIRPORT SERVICE ROAD WIDENING AND STORMWATER IMPROVEMENT PROJECT

 **PROJECT COMPLETED**

General Contractor: Ranger Construction Industries, Inc.

Goal: This update aimed to enhance safety around Runway 5-23, as well as rehabilitate and improve stormwater management along Airport Road.

Start Date: Fall 2024

Completion Date: Winter 2025

Florida Department of Transportation Grant: \$1.73 million

Federal Aviation Administration Grant: \$3.8 million

Project Cost: \$5.4 million

ABOUT THE PROJECT

STORMWATER IMPROVEMENTS

The project consisted of the design and construction of stormwater improvements, including the installation of underground stormwater retention systems along Airport Road and the regrading of airfield stormwater retention areas.

RUNWAY IMPROVEMENTS

The airfield work resulted in a wider runway safety area for Runway 05/23, which helps to reduce the potential for standing water and minimize wildlife attractants. Furthermore, the installation of underground stormwater retention systems enabled the repurposing of previously unusable areas of the Airport for additional uses.

SERVICE ROAD IMPROVEMENTS

This project extended the service road's lifespan, improved safety, and enhanced operational efficiency by rehabilitating and expanding the roadway to accommodate larger vehicles and reduce runway crossings. It also strengthened airfield access by supporting reliable routes to the Air Traffic Control Tower and improving emergency and life-safety vehicle access across the airfield.
